Education

- **Madhav Institute of Technology and Science** — Gwalior, India
  Bachelor of Technology - Information Technology (CGPA: 8.15) — *Aug 2023 – June 2027*
  Courses: *Data Structures, Analysis of Algorithms, DBMS, Operating Systems, Networking*

Skills Summary

- **Languages**: Java (Core, OOP), SQL, Python, JavaScript, TypeScript, C++
- **Backend**: Node.js, REST APIs, GraphQL, System Design, Microservices, OAuth/RBAC
- **Cloud/Databases**: Firebase (Firestore/Auth), AWS (EC2, Lambda), MySQL, PostgreSQL, MongoDB
- **Tools**: Vercel, Docker, Git, Linux (Shell), Postman, Tailwind CSS, Vite

Experience

- **Drippr** — New Delhi, India
  Software Engineer Intern — *Oct 2025 – Jan 2026*
  - Built React/TypeScript dashboard for 100% of merchant operations and real-time revenue analytics.
  - Accomplished a **0% duplicate transaction rate** by designing a Firestore-based Idempotency Ledger that validates Shopify HMAC signatures and unique webhook event IDs.
  - Engineered a serverless backend on **Vercel (Node.js)** that reduced manual data entry by automating Shopify product mirroring via GraphQL and REST APIs.
  - Decreased order processing latency by architecting a real-time data flow using **Firestore onSnapshot**, enabling instant status updates for merchants without page refreshes.
  - Debugged and mitigated a critical data integrity risk by identifying **SKU collision vulnerabilities** and proposing a global uniqueness registry to prevent mis-routing of financial data.
- **Acadable.com** — Gwalior, India
  Lead Full Stack Developer (Founder) — *Dec 2023 – Present*
  - Developed and deployed an EdTech platform serving **3,000+ users**, designing complex Relational Database Schemas to handle multi-course mapping and student progress tracking.
  - Optimized API response times as measured by a **30% reduction in latency** by implementing efficient database indexing and query tuning for a community of 2,000+ students.

Projects

- **SAGIT: Semantic Source-Code Analysis Tool** — Java, JGit, Picocli
  Project Lead - Research under HOD, Dept. of Information Technology — *2025*
  - Engineered a lightweight CLI tool that extends Git with semantic change analysis, achieving **sub-second commit overhead** through optimized Java AST parsing.
  - Accomplished a **40% reduction in manual documentation time** by automating Conventional Commit message drafting via integrated Git hooks (prepare-commit-msg).
  - Ensured **100% data integrity** across history by building a local-first JSONL metadata engine that handles complex rename and copy events.
- **Multi-Tenant Distributed Fault-Tolerant Assessment Platform** — React, Firebase, Shadcn/UI
  Project Lead — *2025*
  - Engineered a scalable SaaS platform supporting **1,000+ concurrent users** by architecting a sharded Firebase backend with Firestore transactions and optimized React listeners.
  - Accomplished a **100% exam resume success rate** by building a fault-tolerant runtime that eliminated data loss through a dual-layer persistence strategy (Server Sync + Local Storage).
  - Enforced strict data isolation as measured by **zero unauthorized access incidents** by implementing Row Level Security (RLS) via complex Firestore Security Rules.
- **Cross-Platform SaaS Food Order and Room Booking System** — React Native, Firebase, Expo
  Project Lead (Freelance/Upwork) — *Jun 2025*
  - Engineered a mobile SaaS solution for real-time hotel bookings and food ordering, achieving **100% data synchronization** across multi-branch branches via a Firestore backend.
  - Accomplished a **zero-error booking rate** by building a custom admin CRUD panel and integrating Google Maps API for automated delivery location verification.
  - Designed a fault-tolerant, offline-friendly architecture using **AsyncStorage** and **TypeScript**, ensuring data persistence during intermittent network connectivity.
