EDUCATION

Madhav Institute of Technology and Science — Gwalior, India
Bachelor of Technology in Information Technology; CGPA: 8.09/10.0 — *Aug 2023 – Jun 2027*

TECHNICAL SKILLS

Fundamentals: Data Structures, Algorithms, System Design, Design Patterns, OOP
Languages: TypeScript, JavaScript, Python, Java, C++, SQL, HTML5, CSS3
Backend: Node.js, Express, Fastify, REST APIs, GraphQL, OAuth 2.0
Frontend: React, Next.js, React Native, Vite, Redux, Tailwind CSS, shadcn/ui
Databases & Cloud: PostgreSQL, MySQL, MongoDB, Firebase (Firestore, Auth), AWS, GCP, Docker
Tools & Security: Git, GitHub, CI/CD, Linux/Bash, JGit, AES-256-GCM, RSA-OAEP

EXPERIENCE

Talkfever Social Media Ltd — Gwalior, India
Full Stack Developer Intern — *Mar 2026 – Present*

- Built a creator monetization subsystem with idempotent **Razorpay** flows, HMAC-SHA256 verification, row locking, transactional wallet transfers, and an append-style double-entry ledger guaranteeing zero duplicate charges.
- Engineered an 8-service **Node.js**/**Express** backend serving **13.8M users** behind a path-based API gateway, backed by a 41-table **PostgreSQL** schema with 63 indexes including partial, GIN, and compound cursor indexes.
- Architected a polymorphic publishing model with relational lifecycle/privacy/paid-content columns and extensible **JSONB** subtype payloads (blogs, polls, media, check-ins), supporting 6+ content types without table-per-type overhead.
- Built the **Next.js 16** / **React 19** frontend with **TanStack Query** infinite cursor pagination, **Redux Toolkit** state management, and database-enforced engagement deduplication for accurate activation metrics.

Drippr Technologies — New Delhi, India
Software Engineer Intern — *Oct 2025 – Jan 2026*

- Built the Drippr Seller merchant dashboard end-to-end, used by **500+ merchants**, with a **Vite + React + Tailwind** UI, a stateless serverless API on **Vercel**, and **Firestore** `onSnapshot` live data sync.
- Engineered the order-routing pipeline that ingests **Shopify** webhooks, groups line items by merchant, and mirrors them into Firestore, handling **thousands of orders daily** in real time.
- Identified and mitigated a critical SKU-collision data-integrity risk by designing a global uniqueness strategy for accurate multi-merchant order routing.

PROJECTS

PackShell (npm) — *TypeScript, Commander.js, Firebase*

- Designed a **zero-trust** `.env` synchronization CLI with client-side **AES-256-GCM** authenticated encryption before transmission, backed by a ciphertext-only **Next.js + Firebase**/**Firestore** backend that never handles plaintext secrets.
- Built a hybrid cryptographic key model where a symmetric project key encrypts payloads and **RSA-OAEP-4096** securely distributes that key to teammates via per-user public-key encryption with fingerprint verification.
- Shipped a full CLI surface (`init`, `push`, `pull`, `diff`, `watch`, `invite`, `share`, `join`) with immutable versioned snapshots, short-lived hashed-token auth, timing-safe comparison, RBAC, and audit logging.

SAGIT: Semantic Git Analysis Tool — *Java, JGit, Picocli*

- Built an AST-based diff engine in **Java** that detects semantic code deltas (renames, signature changes, structural moves) by traversing **JGit** revision trees and comparing nodes via a custom AST comparator.
- Exposed a **Picocli** CLI and a Git pre-commit hook that auto-generates structured commit documentation from detected deltas, cutting manual documentation effort.
- Validated the engine across **3 real-world Java repositories**; research project under the HOD, Dept. of IT, MITS, with a research paper submitted to the university.

LazyServe (Open Source, npm) — *TypeScript, Fastify*

- Published **LazyServe** (npm v1.0.3, MIT, **1,000+ downloads**), a **Fastify** proxy using `child_process` lifecycle control to wake local dev servers on demand and sleep them on idle, keeping public tunnel URLs alive without idle resource use.

ACHIEVEMENTS

1st Runner-up, Symbiosis Skill Hackathon ’26 (National Level) • **Finalist**, Hackatron (powered by GitHub)
